Lovish Sharma

Full-Stack Software Engineer

+91 97798 98119 | slovish11sharma@gmail.com | linkedin.com/in/lovish1sharma | Bangalore, India

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2+ years of experience designing, building, and shipping end-to-end web applications across Vue.js, React.js, Next.js, .NET (C#), Node.js/Express.js, SQL Server, PostgreSQL, and MongoDB. Delivered full-stack features from database schema through REST API to production UI, improving search relevancy by **22%**, cutting operational overhead by **40%**, and scaling backend APIs to **50K+ SKUs at sub-200ms latency**. Experienced with Agile/Scrum delivery, CI/CD (Azure DevOps), and OAuth 2.0/RBAC security across the full stack.

TECHNICAL SKILLS

Frontend: Vue.js, React.js, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI
Backend & Runtime: .NET Framework (C#), Node.js, Express.js, Java, Python, RESTful API Design
Databases: SQL Server, PostgreSQL, MongoDB, MongoDB Atlas Search (Full-Text Search), Query Optimization, Indexing
Cloud, DevOps & Tools: Azure DevOps (CI/CD), Docker, Git, GitHub, PowerShell, Lucidworks Fusion
Concepts & Practices: Full-Stack Web Development, Scalable System Design, Agile/Scrum, OAuth 2.0, RBAC (Role-Based Access Control), Data Structures & Algorithms, Object-Oriented Programming (OOP)

EXPERIENCE

Software Engineer I, Microchip Technology India Pvt. Ltd *Bangalore, India — July 2024 – Present*

- Architected and shipped TreeLink, a full-stack Vue.js and .NET (C#) application for hierarchical product-category visualization, including a Progressive Web App (PWA) offline mode that caches data locally and refreshes it via ETag-based validation once connectivity returns — enabling product managers to restructure category trees **3x faster** than the prior manual process.
- Migrated the frontend of Reliability Report, a public-facing Microchip web application, from Vue 2 to Vue 3, and continue to extend it with new frontend sections and SQL Server-backed REST APIs for ongoing feature enhancements.
- Improved search relevancy by **22%** and drove **near-elimination of null-result queries across millions of catalog items** by architecting a Lucidworks Fusion integration with .NET REST APIs and SQL Server, directly increasing product discoverability.
- Delivered and owned **3+ full-stack internal admin applications** (Vue.js, .NET, MongoDB, SQL Server) supporting internal user-access validation and parametric chart configuration, including initial Azure DevOps CI/CD pipeline setup, that consolidated product data-management workflows and cut manual operational overhead by an estimated **40% company-wide**.
- Scaled backend APIs to handle **50K+ product SKUs** at consistent **sub-200ms response times** by optimizing SQL Server query plans and introducing targeted indexing strategies.
- Built an independent full-stack .NET and MongoDB application to retrieve **5,000+ block-diagram image assets** via MongoDB Atlas Search-based full-text indexing with partial-match, keyword-order-agnostic matching, and pagination.
- Prototyped a Python LLM chatbot proof-of-concept that classified user intent to scope responses to the relevant business unit, improving cross-functional query relevancy.

Software Engineer Intern, Microchip Technology India Pvt. Ltd *Bangalore, India — January 2024 – June 2024*

- Developed a real-time full-stack search analytics dashboard surfacing KPIs (click-through rate, zero-result rate, query volume) to monitor search-engine health, informing the data-driven tuning behind the team's subsequent **22% relevancy gain**.
- Engineered PowerShell automation scripts for recurring ETL operations that eliminated **8+ hours per week** of manual data-insertion work and cut the human error rate by **over 90%**.
- Resolved **15+ critical bugs** across frontend and backend modules, improving page load times by **30%**.

PROJECTS

SoundSwap | *React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Spotify API, YouTube API, OAuth 2.0*

- Launched a full-stack playlist-migration platform (React.js; Node.js/Express.js/MongoDB) syncing **500+ track playlists** in real time between Spotify and YouTube Music via dual Spotify and Google OAuth 2.0 integrations, with a REST API layer achieving **sub-300ms average response time** and full privacy compliance.

Patient Management System | *Java, Spring Boot, gRPC, Kafka, PostgreSQL, JWT, AWS CDK, Docker, GitHub Actions*

- Built a full-stack microservices-based patient management platform following a database-per-service architecture (Patient, Billing, Notification, and Auth services in Spring Boot), implementing synchronous gRPC calls between services, event-driven communication via Kafka with Protobuf serialization, centralized JWT authentication, and API Gateway routing, with cloud infrastructure defined as code via AWS CDK and validated locally through LocalStack.
- Implemented CI/CD automation using GitHub Actions to build, push, and pull Docker images across all microservices, streamlining the containerized deployment workflow.

EDUCATION

Chandigarh University, Mohali, Punjab *2020 – 2024*
Bachelor of Engineering in Computer Science, CGPA: **8.35 / 10**
